LETTER FROM THE EDITOR:

Tuesday, June 30th, 2026 at 7:40 PM CST.

Hello Trendy Zine Fans!

We are now at Trendy Zine 006 covering trends from Saturday, June 20, 2026 at 4:50 PM CST, to Friday, June 26, 2026 at 7:58 PM CST.

Continuing the work to establish changes that work better for my publishing overall, I'm working toward eventually combining the Surf Man Website Directory, Articles Mix Zine, and Trendy Zine into one giant publication. I have to get the first issue of Surf Man Website Directory published first, and that is a work in progress.

As always, thank you for reading Trendy Zine!

Let's get to the latest trends . . .

X & GOOGLE TRENDS

This trends list includes the top trending hashtags and topics on X, plus top Google searches during the period of Saturday, June 20, 2026 at 4:50 PM CST, to Friday, June 26, 2026 at 7:58 PM CST.

There is a total of 5,901 trends in this roundup.

RECENT NEWS

Surf Man Recent News was started on Friday, June 12th, 2026 at 11:20 PM CST, and has been curating news events (primarily search engine, social media, and technology) ever since.

I like to keep up with current events as much as possible, especially in technology news. This section allows me to share some of the latest events I've come across that I think is worth sharing.

Disclaimer: I do not personally write these news summaries. I use Perplexity to get summaries of these news events from articles published by the top publishers in whatever fields they specialize in. These summaries are designed to give you all the details you need in this ad-free publication. Source links are provided if you would like to go online to read more. Please bear in mind that AI can sometimes make mistakes. So if you are in doubt about any facts, check the source links provided, or visit your favorite search engine online to research more. I know some people have reservations regarding the use of AI in this manner. The idea here is not to turn the news into "AI slopified content", as I know some people would be quick to label this simply out of hate for AI, but to use AI responsibly for it's power to tell what needs to be told, much in the same way that a human would by reading an article and providing similar human-written summaries, in a format that doesn't bombard readers with distractions.

Contains some previously published content for readers who may have missed some stories.

In this issue I'm starting a new format. You'll get all of the news stories, and then sources & references after. This is to provide you with an uninterrupted reading experience.

KOBO TEAMS UP WITH STORYGRAPH FOR SMARTER READING TRACKING – Kobo's latest update brings deep integration with StoryGraph, an independent reading-tracker and recommendation platform, turning Kobo e-readers and apps into a more direct alternative to Amazon's Kindle-Goodreads ecosystem by automatically syncing users' reading activity, stats, and challenges without requiring any manual updates. Once a Kobo account is linked, any Kobo device or app can now push progress for both ebooks and audiobooks to StoryGraph, which in turn updates shelves such as "In Progress" and "Read," maintains reading streaks, and feeds StoryGraph's mood- and pacing-based analytics that surface tailored book recommendations and visual charts about a reader's habits. The feature, available for all Kobo account-based content and live as of June, does not require a StoryGraph subscription, though the service offers an optional five-dollar-per-month Plus tier that unlocks more granular stats, filters, custom charts, and comparison tools for power users who want deeper insights into their reading life. –

<https://techcrunch.com/2026/06/29/watch-out-amazon-the-kobo-e-reader-now-has-a-goodreads-rival/>

BASE44 BETS ON ITS OWN AI BRAIN – Base44, a "vibe coding" platform acquired by Wix for 80 million dollars when it was only about six months old and had a team of eight, is rolling

out its first proprietary large language model, Base1, to power natural-language app creation and carve out defensibility in a crowded AI tooling market where many startups simply resell access to the same frontier models. The company says Base1 was trained on tens of millions of real user interactions inside its product, giving it a tighter feedback loop than generic models and allowing it to better understand how non-technical users describe the apps they want, while also being tuned for Base44's workflow of translating loose "vibes" into working full-stack code. Founder Maor Shlomo argues that owning the model as part of the entire stack lets Base44 optimize latency, cost, and efficiency, and a company press statement notes that control over compute and inference spending should translate into structurally stronger margins over time compared with renting external models like Anthropic's Opus. The move also differentiates Base44 from rivals such as Lovable by leaning heavily on proprietary data and infrastructure for defensibility, though Base44 still supports third-party LLMs (including GPT-5) and recently shipped features like "Superagents," autonomous AI agents that can orchestrate multi-step tasks within user-built apps, as well as a backend-as-a-service platform designed so AI coding agents can read and write infrastructure directly. -

<https://techcrunch.com/2026/06/29/vibe-coding-platform-base44-launches-own-model-as-ai-startups-look-for-defensibility/>

AI, JOBS, AND THE TWO-SPEED ECONOMY - A new analysis of nearly 22,000 companies' spending and workforce data suggests that heavy adopters of AI are actually adding jobs, even as headline-grabbing layoff announcements fuel fears that automation will erase vast swaths of work. The report, produced by Ramp (which tracks enterprise AI spend) and

Revelio Labs (which analyzes workforce records), finds that “high-intensity” adopters—firms spending about 30 dollars per employee per month on AI in the first three months—grew overall headcount by 10.2%, with increases spread across engineering, sales, administration, customer service, finance, marketing, and scientist roles. Within this group, entry-level hiring rose 12%, contradicting the popular narrative that AI adoption necessarily wipes out junior roles, though the authors stress their findings do not prove that AI broadly creates jobs, only that it can correlate with expansion in certain contexts. The positive picture has important caveats: the sample is skewed toward tech-forward, knowledge-work firms—often venture-backed and already growing—so it is hard to untangle whether AI is causing job growth or merely accompanying firms that were expanding anyway. Recent research from Goldman Sachs, for example, estimates AI has still contributed to roughly 16,000 net job losses per month over the past year, especially among Gen Z and entry-level workers, and broader projections warn that up to 15% of U.S. jobs could be eliminated by AI in the next five years. Rather than acting purely as a labor-substitution tool, AI in software and tech companies appears to make core outputs—such as code, internal tools, documentation, and product development—cheaper and faster to produce, which can raise the return on scaling entire organizations, not just engineering teams. But the report notes that firms dabbling in AI via short-lived pilots and subscriptions, without committing to deeper adoption, did not see similar headcount gains, hinting at a widening gap between organizations with the capital, technical talent, and leadership capacity to turn AI into productivity and growth and those stuck in experimentation. The authors conclude that while their data counters blanket claims that AI inevitably destroys jobs, it also implies that the biggest benefits will likely flow to

companies already rich in resources and capabilities, leaving less-equipped firms—and their workers—at risk of falling further behind. – <https://techcrunch.com/2026/06/29/the-ai-jobs-debate-just-got-messier/>

ATTIE: BLUESKY'S AI-POWERED FEED SHAPER – Bluesky's newest project is a standalone AI app called Attie, an Anthropic Claude-powered assistant built on the company's open AT Protocol that lets people design their own social media feeds by typing natural-language prompts instead of writing code, with early access currently limited to attendees of the Atmosphere developer conference who are acting as beta testers. Former CEO Jay Graber, now chief innovation officer, and CTO Paul Frazee introduced Attie as an “AI product that's very people-focused,” saying it is meant to invert the typical opaque algorithm model by letting users describe the posts, topics, and vibes they want to see and then having the app fetch and rank content from Bluesky and other AT Protocol-compatible networks accordingly, effectively allowing users to “vibe-code” their own apps and custom feeds over time. After signing in with their AT Protocol credentials, Attie can draw on existing public activity to infer interests and then lets users refine their timelines by asking for specific kinds of posts to highlight or filter out, with the longer-term roadmap including deeper integration back into Bluesky and other ATProto apps, as well as potential tools that would allow people to package and share these user-defined algorithms without needing any formal programming knowledge. – <https://gizmodo.com/bluesky-has-a-new-app-and-its-all-about-ai-2000739514>

X MONEY AND THE ‘EVERYTHING APP’ PUSH – A long-promised payments and banking layer called X Money is reportedly

nearing a limited public debut inside X's mobile app, following a previously announced Visa partnership that underpins a digital wallet, peer-to-peer transfers, and an X-branded metal debit card printed with users' handles, plus perks like 3% cash back on some purchases and a savings feature advertised around 6% interest—far above typical U.S. savings rates. Bloomberg reporting indicates that employees and a small group of testers are already using the service and interacting with an “AI concierge” built by xAI that surfaces account activity and insights, reinforcing Elon Musk's stated ambition to fuse social networking, media, messaging, shopping, and personal finance into a single “everything app.” X Money's rollout has been slowed by regulatory hurdles because the service needs authorization across all 50 U.S. states, and while Musk has floated optimistic timelines before, he recently suggested an external beta could arrive in a month or two, with a broader launch to follow if licensing and technical testing go to plan. - <https://gizmodo.com/xs-everything-app-metamorphosis-supposedly-accelerating-soon-with-x-money-rollout-2000750828>

DORSEY'S AI-FREE VINE REVIVAL - A new short-form video app called Divine has launched on iOS and Android as a spiritual successor to Vine, offering six-second looping clips and an archive of around 500,000 classic Vine videos sourced from backups preserved by ArchiveTeam and the Internet Archive, while stressing that it has no official connection to X (formerly Twitter) or the original Vine platform. The project is funded by Jack Dorsey's collective And Other Stuff and built by former Twitter employee Evan Henshaw-Plath (aka “Rabble”), who was inspired to resurrect the format after listening to a podcast about Vine's cultural impact, and it runs on open-source technology and the decentralized Nostr

protocol so creators retain greater control over their content and followers. Divine is invite-only at launch but plans a wider rollout, and its creators emphasize a mostly AI-free environment using a multilayered system to detect generative AI and block such videos from being posted, positioning the service as an antidote to algorithm-heavy, ad-driven feeds by letting users choose among multiple recommendation algorithms rather than relying on a single opaque, engagement-maximizing system. - <https://gizmodo.com/jack-dorsey-beats-elon-musk-to-the-punch-with-a-reboot-of-vine-2000752164>

DIGG'S AI-POWERED NEWS COMEBACK - A once-dominant social news site has resurfaced yet again, this time as a stripped-down AI-focused news hub that lives at di.gg/ai and presents itself with a simple "Hello Again" greeting before funneling users into a beige, minimalist feed highlighting the fastest-moving stories in artificial intelligence. The new incarnation follows a January relaunch that was shut down just two months later, after the company-reacquired by its original founder Kevin Rose alongside Reddit cofounder Alexis Ohanian-laid off much of its staff and abandoned an earlier promise to build a "human-centered" discussion platform that would use AI to improve transparency and fight spam. In its current form, di.gg/ai focuses on AI as its first "vertical," with Rose saying more topics will eventually be added, and the site's homepage now features a "Highlights" section at the top plus a ranked feed of links to AI papers, launches, threads, and hot takes that "fly past faster than anyone can keep up with." Rather than relying on activity within its own community, the service ingests posts from X in real time and analyzes popularity and sentiment to determine which links surface on Digg, displaying clusters of user avatars from X

next to each story to visually indicate that external chatter is driving its curation engine. This pivot positions the resurrected brand less as a Reddit-style discussion board and more as a meta-layer on top of existing social platforms, attempting to distill the “signal” from AI’s noisy information firehose while promising that AI will remain just the starting point for future expansion into other high-velocity news domains. – <https://gizmodo.com/remember-digg-its-back-in-ai-news-outlet-form-2000757334>

WHATSAPP’S NEW USERNAME RUSH: WHY YOU SHOULD CLAIM YOURS NOW – WhatsApp, which now serves over three billion users, has opened early reservations for its long-awaited username feature so people can secure unique handles before the system fully launches later this year, reducing the chances of someone else grabbing a preferred name first. Usernames will let people connect without sharing phone numbers, adding an extra privacy layer for new conversations, though existing contacts will still see your number as usual. Meta is rolling this out gradually across countries and says the goal is to make communication “even more private,” while also giving individuals, creators, businesses, and organizations a way to keep a consistent identity across Meta platforms by allowing them to claim the same handle they already use on Facebook or Instagram. To reserve a username, you need to update WhatsApp, open the app’s Settings, go to the Account section, and tap Username (or Reserve username on some devices), where you can either create a new handle from scratch or link an existing Meta username, subject to availability and format rules like length limits and allowed characters. There will be no public directory or automatic suggestions, so people must know your exact username to message you, and WhatsApp is also adding an optional “username key” (a PIN-like code) that

others must know in addition to your username before they can contact you, which helps cut down on spam and unwanted messages if your handle becomes widely known. The company emphasizes that reservations are not permanent commitments—you can change your username later as long as the new one is free—but warns that with billions of users, desirable names will disappear quickly, so claiming a handle early is likely the best way to secure a memorable, on-brand, or personally significant username for future use. -

<https://gizmodo.com/you-need-to-claim-your-whatsapp-username-right-now-2000779082>

INSTAGRAM GRID FREEDOM: USERS CAN FINALLY REARRANGE THEIR PROFILE LAYOUTS - After years of requests and creator workarounds like deleting and reposting old content, Instagram has finally rolled out a “Reorder grid” feature that lets users freely rearrange the posts on their profile, breaking the platform’s long-standing chronological lock on grid layouts. Announced with a simple “Finally” by Instagram head Adam Mosseri and now available globally on iOS and Android, the update allows anyone to long-press a post on their profile, tap “Reorder grid” in the menu, and drag that post to a new position, making it possible to surface evergreen content, refine aesthetic themes, or reshape the first impression visitors get without sacrificing likes, comments, or history. The feature affects only the main profile grid, leaving pinned posts and reels fixed at the top so creators can still highlight key content, while everything else beneath those pins can be shuffled as often as desired, offering a level of visual control that previously required risky “archive and reset” strategies or carefully timed posting to maintain a particular pattern. This long-anticipated change arrives amid a broader wave of

Instagram updates focused on giving users more control over how their profiles look and feel, and it effectively turns the grid into a living portfolio that can be curated over time rather than a static chronicle of whatever happened to be posted most recently. - <https://gizmodo.com/at-long-last-instagram-users-are-free-to-reorganize-their-grids-2000769285>

BLUESKY COMMUNITIES: SUBREDDIT-STYLE GROUPS ARE COMING TO THE DECENTRALIZED FEED - Decentralized social network Bluesky is preparing to introduce a “communities” feature that carves its single, giant feed into smaller, topic-focused spaces reminiscent of Reddit’s subreddits, giving users dedicated places to dive deeper into niche interests and interact with others who care about the same subjects. Head of product Alex Benzer says communities will function as mini-hubs inside Bluesky where people can create or join groups, post content, and get updates, shifting the platform away from the current model where everything happens in one sprawling timeline and toward a structure that better supports sustained conversations and shared identity within specific themes. Each community will receive a unique handle that doubles as a URL—examples include `community-name.bsky.social` or `community-name.bsky.space`—and visiting that address will show a custom homepage for the group, with creators able to go beyond the default layout and build specialized experiences using apps and tools from the AT Protocol ecosystem that underpins Bluesky. Communities will support three privacy modes: public groups that anyone can view and post in, invite-only spaces that show up in searches but require approval to join, and fully private communities that stay hidden from discovery and are accessible only by direct link and invitation, enabling organizers to match openness and moderation style to the needs of their audience. Posts from these communities are

expected to surface either in Bluesky's Discover feed or in a dedicated community feed, and users will be able to opt into alerts for new posts and replies, with Benzer promising more details as the feature is built and noting that the team is consulting with developers and community organizers to refine how these subreddit-like spaces work inside the broader decentralized network. - <https://gizmodo.com/bluesky-will-soon-have-a-communities-feature-sort-of-like-subreddits-2000767298>

WIKIPEDIA COFOUNDER LARRY SANGER INDEFINITELY BANNED FOR OFF-WIKI INFLUENCE PUSH - Larry Sanger, one of the original cofounders of Wikipedia and a longtime vocal critic of the encyclopedia's governance and perceived ideological tilt, has been indefinitely banned from editing after volunteer administrators concluded he violated site rules by trying to rally his social media followers to sway an internal community debate. A block notice attached to his contributor page cites "off-wiki canvassing" and states there is broad agreement among participating editors that Sanger is "not here to constructively build the encyclopedia," with some also warning that his actions bordered on "calls for outing," a serious violation given Wikipedia's emphasis on pseudonymous volunteer editing. The controversy centers on Sanger's proposed "WikiProject Intellectual Diversity," a group he wanted officially recognized to promote what he describes as underrepresented viewpoints and counter what he sees as Wikipedia's left-leaning, globalist, secular, and progressive bias, but the turning point appears to have been a series of posts on X in which he linked to the project's discussion page and highlighted that many users both supported and opposed it. In one exchange, Sanger joked that answering a follower's question about joining the effort

could get him blocked by the “playground moms who rule Wikipedia,” a remark that editors interpreted as an attempt to mobilize his external audience to intervene in internal decision-making, prompting a heated review that briefly blocked him before the customary 72-hour deliberation window had elapsed, then restored his access, and finally reimposed the indefinite ban once the full period closed. The Wikimedia Foundation responded by emphasizing that editorial policies and sanctions on Wikipedia are set and enforced by the volunteer community through transparent, consensus-driven discussions, not by the foundation itself, while Sanger, in statements and social media posts, denounced the process as a “kangaroo court” lacking formal charges, neutral adjudication, or meaningful due process, and argued that “mob-rule anarchy” now dominates the site and punishes attempts to broaden its intellectual diversity. The episode adds another chapter to Sanger’s long history of conflict with the project he helped create—having left in 2002, launched alternative platforms, and recently published “Nine Theses on Wikipedia” calling for reforms like ending consensus-based decision-making and allowing competing articles—ideas that drew praise from figures such as Elon Musk, who later introduced his own rival knowledge site. – <https://gizmodo.com/one-of-wikipedias-cofounders-banned-from-the-site-over-influence-campaigns-2000776345>

TOKENPOCALYPSE FOR OFFICE WORKERS: AI USAGE LIMITS ARE COMING FOR YOUR PDFs – A growing number of large companies that once aggressively pushed employees to use AI for everything are now slamming the brakes after realizing that nontechnical staff are burning massive amounts of tokens on low-value tasks, with a new report revealing that routine jobs like converting PDFs into slide decks are consuming more AI

resources than engineering work. Audio from an internal meeting at consulting giant Accenture captures leaders warning about “soaring token spend” driven primarily by non-engineers, whose AI usage for presentation prep and similar chores now outpaces technical staff, underscoring how corporate incentives that tied promotions and performance evaluations to chatbot logins and “regular adoption” of AI have unintentionally encouraged wasteful behavior. PDFs are singled out as a particularly bad culprit because AI tools must parse not only text but also layouts, images, charts, and other visual elements on every page, making the format a “token black hole” that was once tolerated when AI budgets felt like free money but is suddenly painful now that pricing has shifted to usage-based models and AI labs are moving toward IPOs. Similar patterns have emerged at major tech firms like Meta and Amazon, where internal leaderboards rewarded workers for burning the most tokens, effectively gamifying AI consumption and prompting people to offload menial tasks they could have handled themselves just to climb the rankings, a strategy that looked clever when tokens were cheap but now translates directly into eye-watering bills. As costs spike, companies that built reputations on advising others about efficiency—Accenture among them—are quietly reversing course, asking staff to cut back on AI usage instead of ramping it up, and unintentionally illustrating how poorly thought-out metrics and cultural pressure around “using AI for everything” can backfire once the true economics of token-based computing finally hit the ledger. -

SPACEX STARPIPE: BUILDING A FUEL SUPERHIGHWAY FOR STARSHIP - SpaceX is moving to control yet another critical piece of its launch infrastructure by building an eight-mile natural gas pipeline dubbed “Starpipeline” to directly feed its Starbase

facility in Texas, ensuring a steady supply of fuel for a rapidly growing cadence of Starship missions. Through its affiliate Lone Star Mineral Development, the company has filed plans with the Texas Railroad Commission to enter the natural gas business, extracting gas and then liquefying it on site so it can be used as liquid methane propellant, a shift that would reduce reliance on outside suppliers and tanker trucks while tightening SpaceX's grip on its own supply chain from fuel source to launch pad. Each Starship launch consumes roughly 630,000 gallons of liquid methane—about 55 million standard cubic feet of natural gas—so the pipeline, which will start at an 83-acre parcel the firm is leasing at the Port of Brownsville and end at Starbase, is designed to support far more than the currently approved 25 launches per year and to pave the way for the hundreds of annual flights envisioned in SpaceX's long-term plan for rapid reusability, lunar bases, and eventual Mars settlement. Engineering documents show the line will be around 16 inches in diameter and paired with a new liquefaction facility at Starbase to convert the piped gas into liquid methane, with service targeted for early 2026–2027 depending on filings and construction timelines, making it an unusual but strategically important step as a private space company builds its own dedicated hydrocarbon “fuel superhighway” to keep pace with the scale of the Starship program. Combined with its dominance in commercial launches through Falcon 9 and its sprawling Starlink satellite constellation in low Earth orbit, the Starpipe project underscores how SpaceX is using internal capital to vertically integrate everything from rockets and spacecraft to launch infrastructure and now raw fuel, tightening its already formidable hold over the modern space industry. – <https://gizmodo.com/spacex-wants-its-own-gas-pipeline-to-feed-all-the-starships-2000778302>

GOOGLE CALENDAR OPENS THE COLOR FLOODGATES FOR EVENT ORGANIZATION – A long-requested update to Google Calendar now lets users assign virtually any color they want to individual events, moving beyond the old limitation of a small, fixed palette and giving people far more control over how they visually organize their schedules. Instead of being confined to 11 standard hues, users can now pick from 24 default options and then define additional shades via an RGB color picker on the web, effectively enabling up to around 200 custom colors for events that can be tailored to specific projects, priorities, or personal categories. The change applies across the web interface, mobile apps, and even the Calendar API, meaning both everyday users and developers integrating Calendar into other tools can take advantage of the expanded palette to make different types of events stand out more clearly at a glance. The feature rolls out automatically with no admin controls required: it is turned on by default for all Workspace customers, Workspace Individual subscribers, and personal account holders, with rapid release domains seeing it first and scheduled release domains following a couple of weeks later, ensuring that over time nearly everyone using the service gains the ability to style their calendars with a custom color system that matches the way they think and work. –

<https://www.engadget.com/2197314/google-calendar-lets-you-use-any-color-you-want-for-your-events/>

SAMSUNG GALAXY A27 5G: SMALL UPGRADES, BIGGER PRICE TAG – Samsung’s newest budget-focused smartphone, the Galaxy A27 5G, makes a handful of modest changes compared with its predecessor while quietly tacking on a \$50 price increase that pushes the starting cost to \$350 in the US. The headline upgrade is a shift to a 6.5-inch Infinity-O display with a

centered punch-hole camera that replaces the older notch, still offering 120Hz refresh and Full HD+ resolution but mainly serving as a visual modernization rather than a transformative feature bump. Under the hood, the phone now uses Qualcomm's Snapdragon 6 Gen 3 chipset instead of Samsung's own Exynos silicon, promising snappier everyday performance and a notable GPU boost while keeping 6GB of RAM and 128GB of storage as the base configuration, alongside a microSD card slot that supports expansion up to 1TB for users needing more space. The rear camera system remains anchored by a 50-megapixel main sensor, though the accompanying ultrawide and macro cameras see only mild adjustments and the front camera drops to 12 megapixels, making the overall photographic package feel more like lateral moves and minor reshuffling rather than a clear generational leap. Other hardware fundamentals stay familiar: a 5,000mAh battery, IP67 dust- and water-resistance, a side-mounted fingerprint sensor in the power button, NFC support for mobile payments, and a plastic frame that keeps weight and cost in check but reinforces the phone's midrange positioning. On the software side, the device ships with Android 16 and Samsung's One UI 8.5, including AI features such as Circle to Search, along with a long-term update promise that aims to make the higher price more palatable by extending security and OS support well into the future. The Galaxy A27 5G will launch first in select international markets on July 3 with multiple color options, then arrive in the US on July 14 in a single black finish, entering a fiercely competitive midrange arena where its restrained improvements and higher price will likely face scrutiny from budget-conscious buyers already feeling broader "chipflation" across the smartphone landscape. -

<https://www.engadget.com/2201668/samsung-s-latest-budget-phone-has-mild-upgrades-and-a-50-price-hike/>

WHEN THE SUN STRIKES: HOW SOLAR STORMS THREATEN POWER, SATELLITES, INTERNET AND EVERYDAY TECH – In 1989, a powerful geomagnetic storm triggered by the Sun famously collapsed Quebec's power grid, cutting electricity to six million people for nine hours and illustrating how solar activity can disrupt modern infrastructure even though the underlying solar eruptions are invisible to the naked eye. Solar storms arise when the Sun's twisted magnetic fields reconnect and release enormous amounts of energy and plasma, producing three main phenomena: solar flares that emit intense bursts of light and radiation capable of unleashing energy comparable to a billion hydrogen bombs and reaching Earth in about eight minutes, radiation storms that send highly charged particles streaming through the solar system and into our atmosphere within roughly half an hour, and coronal mass ejections (CMEs), huge clouds of magnetized plasma whose arrival can disturb Earth's magnetic field and drive geomagnetic storms that threaten power grids, communications networks, and the global internet backbone. Once these storms reach the magnetosphere, their particles distort the planet's magnetic environment and upper atmosphere, generating geomagnetically induced currents (GICs) that flow through transmission lines and into transformers and other equipment, and causing radio blackouts when ionization in the ionosphere changes how radio waves propagate, with the U.S. National Oceanic and Atmospheric Administration grading events from minor (G1, R1, S1) to extreme (G5, R5, S5) and noting that while thousands of mild storms occur each solar cycle, only a handful reach the most severe levels. Power grids are particularly vulnerable in high-latitude regions where magnetic field lines and ground conductivity combine to maximize induced currents: a strong storm can overheat transformers, damage relays and sensors, and shorten equipment lifespans, with past events in places like Sweden

showing that even partial grid failures can be triggered by geomagnetic activity, a risk that now worries experts as AI data centers and other power-hungry industries concentrate enormous loads on already stressed networks. Satellites face their own hazards, as high-energy particles can flip bits in onboard computer chips and trigger “single-event upsets” that force spacecraft to suspend nonessential functions, while CMEs heat and expand the upper atmosphere, increasing drag so that satellites in low Earth orbit can lose thousands of feet of altitude, potentially colliding with other spacecraft or debris and requiring extra fuel to correct their trajectories, thereby shaving years off mission lifetimes; recent storms have already knocked dozens of SpaceX internet satellites out of orbit and scrambled about half the world’s satellites in 2003, affecting flights, TV and radio, GPS, and science missions. Communications systems that depend on the ionosphere are also exposed: GPS receivers can suffer large positional errors when ionization changes signal paths, shortwave radio used by ships, aircraft, emergency services, and militaries can lose range or suffer misdirected signals, and satellite-based communication can experience scintillation, rapid amplitude and phase shifts that degrade or interrupt connections, although everyday cellular service is relatively robust because its frequencies and infrastructure rely less directly on ionospheric behavior. The global internet has a critical weak point in its long-distance submarine fiber optic cables, which carry roughly 95 percent of international data and rely on repeater stations every few dozen miles to amplify light signals; while the glass fibers are immune to GICs, the electronic repeaters are not, and research by UC Irvine’s Sangeetha Abdu Jyothi suggests a sufficiently large CME could knock out key transoceanic links, especially those between North America and Europe, creating an “internet apocalypse” that mainly

affects cross-continental traffic while leaving many regional networks intact. Historically, our modern systems have not yet been tested by the most extreme storms: the benchmark Carrington Event of 1859, about three times stronger than the Quebec storm, produced auroras visible as far south as Panama and caused telegraph machines to catch fire, and ice-core studies of carbon-14 hint at even larger “Miyake events,” such as one in 774 AD that may have been around twelve times more intense, leading scientists to warn that a similar storm today could strand aircraft, collapse grids, sever internet connectivity, and disrupt global communication on a scale that agencies have only begun to model. On an individual level, people can prepare for long-duration outages with generators, solar-charged home battery systems like the Powerwall or Solix E10, portable power stations, and uninterruptible power supplies to keep essential electronics running, while at national and international levels, studies estimate that hardening power grids alone in the U.S. could cost hundreds of billions of dollars and that a severe geomagnetic disaster might inflict economic damage exceeding \$2 trillion, even as reports from NOAA and others argue current forecasting and mitigation efforts remain underfunded compared with the scale of the threat. -

INVISIBLE WATCHERS: HOW AI-POWERED FLOCK CAMERAS TURN EVERYDAY LIFE INTO SEARCHABLE SURVEILLANCE - Across the United States, AI-driven automated license plate readers and related systems sold by Flock Safety have rapidly spread along roads, in neighborhoods, and at businesses, quietly transforming public spaces into searchable databases that track far more than just vehicle plates and raising deep

concerns about privacy, security, and abuse. These devices, which run a modified version of Android and stream footage to cloud databases, can be queried in natural language for highly specific descriptions such as a particular color of sedan with a distinctive bumper sticker or a pickup truck carrying a dirt bike, effectively turning everyday movements of drivers and pedestrians into easily searchable “signatures” available to anyone granted access, including cities, private communities, and law enforcement. The company also markets AI person-tracking cameras, mobile surveillance trailers, and quadcopter drones that follow the same principle: instead of sifting through footage manually, users simply type what they want to see and the system surfaces matching clips, a capability that has been linked to nationwide networks where local departments can opt in and where police far from a camera’s home jurisdiction, and even federal agencies such as ICE via data-sharing arrangements, can query footage collected in another state. Despite occasional use in solving serious crimes, these systems monitor everyone regardless of suspicion and have been repeatedly shown to suffer from severe security flaws, including incidents where dozens of cameras were left openly accessible via internet search, revealing live, password-free streams of children at parks and families in intimate moments, and where simple physical access allowed a researcher to press a button, connect via Wi-Fi, gain root privileges, and even install malware through exposed USB ports. Instead of embracing the kind of cooperative bug reporting that many technology companies use to strengthen their security posture, Flock has attacked independent researchers who uncovered these vulnerabilities, characterizing them as activists opposed to public safety, even as their findings underscore how easily these systems could be hijacked or misused. Parallel to the technical

issues, documented cases show police officers exploiting Flock's tools to stalk ex-partners and other individuals without warrants or paperwork, with victims sometimes discovering hundreds of searches on their movements only after checking tools like HaveIBeenFlocked, while separate reporting revealed that company employees had viewed and shared footage of children at a community center pool and gym classes as part of sales demonstrations, prompting outrage when the company defended the conduct as routine work carried out with municipal permission. Even when explicit abuse is not involved, misidentifications and overbroad alerts regularly ensnare innocent people: drivers have been pulled over repeatedly because cameras confused letters and numbers on plates, one Colorado motorist reported feeling permanently unsafe because officers receive alerts every time his car passes a camera, and a woman falsely accused of package theft had to rely on her vehicle's own dash footage to prove she never stopped near the scene of the alleged crime. Yet cities continue signing and renewing contracts, often driven by political narratives that overstate the technology's crime-fighting successes and by restrictive agreements that make removal confusing or risky, leading some municipalities to resort to symbolic gestures like bagging cameras in garbage sacks rather than outright ripping them out, while groups like the ACLU document how marginalized communities, immigrants, and activists bear disproportionate surveillance burdens. Residents who want to understand the extent of this infrastructure near their homes can now turn to open-source mapping projects like DeFlock, which track the spread of these systems and highlight how quickly AI-enhanced surveillance has normalized the idea that anyone's daily movements can be logged, searched, and cross-referenced far beyond the places they live or drive. -

<https://www.engadget.com/2203000/flock-cameras-recording->

RETHINKING TECH UPGRADES IN THE AGE OF SKYROCKETING COMPONENT COSTS - During World War II, Britain's Make Do and Mend campaign taught citizens to repair and reuse clothing to combat scarcity, and a similar mindset is increasingly necessary today as the AI boom drives unprecedented demand for data center hardware and strains the supply of cutting-edge chips, RAM, and SSDs, with analysts warning that this "RAMpocalypse" could last until around 2030. As a small number of manufacturers struggle to meet rising demand, major tech companies are reacting by significantly increasing prices: Apple is nudging device costs upward, Valve's Steam Machine console alternative arrives at a premium four-figure price tag even without a controller, and Microsoft has hiked prices on the 1TB Xbox Series X and its latest Surface laptops by hundreds of dollars, often without matching improvements in quality. Against a broader backdrop of global conflicts that have pushed food and energy prices higher, consumers are nudged to accept expensive new gadgets as an unavoidable reality, but the article argues that collectively choosing not to buy new hardware unless absolutely necessary for a year or two, embracing a modern Make Do and Mend ethic could both protect wallets and discourage manufacturers from cementing these inflated prices even after the current AI bubble cools. This approach requires challenging the industry's long-running efforts to undermine repairability and user control, and rebuilding confidence in basic maintenance: from modular, repair-friendly products like Fairphone phones and Framework laptops, to DIY fixes such as replacing a TV backlight or sourcing a cheap lawnmower part online instead of paying a steep service quote, or at minimum consistently supporting independent repair shops and sharing

tools and knowledge within local communities. Policy changes are also slowly shifting the landscape in favor of repair, with measures like Oregon's 2024 ban on restrictive parts pairing that blocks third-party components, and European Union rules requiring devices sold after February 18, 2027 to include easily replaceable batteries as part of a broader effort to reduce e-waste. When devices truly are beyond sensible repair, the piece urges consumers to look first to refurbished and certified used hardware, noting the abundant inventory of slightly older phones and laptops that can deliver near-flagship performance at substantially lower prices for buyers willing to resist constant marketing pressure for the "latest and greatest." Ultimately, the argument is that the tech sector should not be able to rely on passive, unquestioning consumer behavior, especially from companies whose aggressive AI investments helped fuel the current supply crunch, and that users must actively push back, reclaim repair skills, and reassert control over their devices rather than simply absorbing whatever costly products and policies the industry chooses to impose. -

<https://www.engadget.com/2201848/its-time-to-make-do-and-mend/>

ISS STANDOFF: NASA HALTS RISKY RUSSIAN REPAIR PLAN ON LEAKING MODULE - Tensions between NASA and Russia's space agency flared again this month over how to handle a long-running air leak in the International Space Station's Russian PrK module, after Russian controllers prepared to send cosmonauts in with a saw to cut away a load-bearing bracket around the cracked area, an improvised fix that U.S. officials feared could destabilize the already weakened structure. On June 5, as that operation neared, NASA quietly ordered its five astronauts to shelter inside a docked SpaceX Dragon

spacecraft “out of an abundance of caution,” effectively signaling that it considered the planned cutting job too dangerous and wanted the option to rapidly evacuate if the repair went wrong or triggered a sudden depressurization. According to sources who later spoke anonymously to space reporters, the shelter order and behind-the-scenes objections prompted Russian managers to back down from the saw plan, and ongoing discussions have since shifted toward possibly decommissioning and sealing off the leaking module entirely, a dramatic step that would permanently reduce habitable volume and flexibility on the already aging orbital lab. The incident underscores how a five-year dispute over the leak’s root cause and risk, NASA warning of a potential “catastrophic failure,” Roscosmos insisting the situation is under control, has eroded trust and turned what was once a symbol of post-Cold War cooperation into a venue where geopolitical friction, engineering uncertainty, and diverging risk tolerances now shape even basic maintenance decisions in orbit. - <https://futurism.com/space/tension-flares-russia-nasa-international-space-station-leak>

TITAN IS A COLOSSAL NATURAL FACTORY CHURNING OUT HYDROCARBONS BY THE PLANETFUL - Scientists say Saturn’s largest moon, Titan, continuously manufactures staggering amounts of organic hydrocarbons in its thick, nitrogen-rich atmosphere, where sunlight and charged particles relentlessly break apart methane and recombine it into more complex molecules that condense, rain down, and collect as rivers, lakes, and vast dune fields of carbon-bearing material on the frigid surface. Radar and spectrometer data from the Cassini-Huygens mission show that Titan’s polar regions host hundreds of lakes and seas filled with liquid methane and ethane, some individual basins holding energy equivalents comparable to or greater

than all known oil and gas reserves on Earth, while dark equatorial dunes built from solid organics appear to contain several hundred times our planet's coal reserves. Researchers describe Titan as a giant organic-chemistry laboratory and "carbon factory," noting that complex hydrocarbons and nitriles are detected high in its hazy atmosphere and then cycled through a methane-based hydrological system that eerily mirrors Earth's water cycle, with clouds, rain, rivers, and seas, but at temperatures near minus 180 degrees Celsius. Though this alien environment is far too cold for familiar life, its rich inventory of prebiotic molecules and active surface-atmosphere chemistry make Titan a prime target for future missions seeking to understand how simple compounds evolve into more elaborate organics, and what that might reveal about the conditions that preceded life on early Earth. - <https://futurism.com/space/saturns-moon-titan-hydrocarbon-production>

MICROSOFT TEAMS' NEW WI-FI "CHECK-IN" TOOL BLURS THE LINE BETWEEN COLLABORATION AND WORKPLACE SURVEILLANCE - Microsoft is rolling out a "workplace check-in" feature for Teams and Microsoft Places that automatically flips an employee's status to "in office" when their device connects to an approved corporate Wi-Fi network, allowing colleagues and managers to see at a glance who is physically on-site without the app ever asking for GPS location or manual status updates. The company pitches the tool as a convenience and coordination aid, replacing manual check-ins, simplifying hybrid scheduling, and helping people plan face-to-face meetings, while stressing that it is disabled by default, must be explicitly turned on by tenant administrators, requires user opt-in, and does not store a history of movements, instead treating presence as an "in-the-moment"

signal that clears at the end of the workday. However, privacy advocates, security experts, and many workers worry that tying Wi-Fi connection data to attendance effectively turns a collaboration app into lightweight “bossware,” making it trivial for employers to verify who really came into the office, enforce return-to-office mandates, and build de facto attendance logs even without precise location tracking, especially in an environment where remote work options are already shrinking. Commentators note that the feature’s power lies in inference rather than GPS coordinates, simply knowing when, where, and how often someone connects to specific office networks can be deeply revealing about their work patterns, and warn that while Microsoft insists the system is “designed for collaboration, not oversight,” organizations could easily repurpose it for monitoring and discipline unless internal policies, transparency, and genuine employee consent keep pace with the technology. -

<https://futurism.com/future-society/microsoft-teams-wifi-surveillance-workers>

THE AI GOLD RUSH IS LEAVING MOST CORPORATE “INNOVATORS” WITH ROTTING, USELESS PROJECTS – Despite years of breathless hype and massive spending, most companies that loudly “embraced AI” are now stuck with half-baked pilots and internal tools that barely get used, as new research and industry surveys show that somewhere between 80% and 95% of enterprise AI initiatives fail to deliver real business value, let alone meaningful profits or cost savings. Leaders rushed in driven by FOMO and investor pressure, slapping AI labels onto existing products, spinning up flashy chatbots and copilots, and announcing “transformational” strategies without first cleaning up fragmented data, redesigning workflows, or building the organizational scaffolding needed to actually

put model outputs into everyday decisions. Many of these systems now sit in a kind of corporate graveyard, unused dashboards, brittle automations, or experimental copilots that employees quietly sidestep, because the people who were supposed to rely on them either don't trust the tools, resent the surveillance and data mining required to run them, or simply find that AI makes their work slower and more confusing instead of easier. Analysts argue that the core problem is not the underlying models but the way organizations treat AI as a magic wand rather than a mundane infrastructure project, expecting instant disruption while skimping on change management, incentives, maintenance, and the "unsexy" work of integrating AI into finance, operations, and other internal processes, areas where the rare 5% of successful adopters quietly report 10x efficiency gains even as the rest of the field's bold AI announcements quietly rot away. - <https://futurism.com/future-society/companies-embraced-ai-rotting-away>

NEW YORK SLAMS THE BRAKES ON WAYMO'S ROBOTAXI DREAMS - After years of lobbying and limited testing, Waymo's plan to turn New York into a flagship robotaxi market has effectively collapsed as state and city leaders walked away from the legal changes the company needed and allowed its existing pilot to quietly expire. Governor Kathy Hochul first dealt a major blow in February by withdrawing a budget proposal that would have allowed commercial driverless taxi services in parts of the state outside New York City, following intense pushback from labor unions, transit workers, and ride-hail drivers who warned that autonomous fleets would threaten thousands of jobs and shift risk onto the public. In parallel, New York City's new mayor chose not to renew Waymo's tightly constrained test permit, covering just eight

cars with safety drivers in parts of Manhattan and Brooklyn, so as of March 31 the company can only operate its vehicles in fully manual mode to collect mapping data, with no autonomous operation and no paying passengers allowed. Critics of the robotaxi industry argue that New York's stance should be a warning to other cities, saying companies oversold safety and congestion benefits while underplaying unresolved technical issues and the social costs of displacing human drivers, whereas AV boosters warn that New York risks being left behind as places like Phoenix, San Francisco, and Miami move ahead with commercial deployments; for now, though, one of the world's most coveted urban taxi markets has clearly signaled that driverless cars are not inevitable but contingent on political consent, and that consent can be revoked. - <https://futurism.com/advanced-transport/waymo-defeated-new-york-city>

SNAP'S \$2,195 'SPECS' AR GLASSES GET ROASTED AS STOCK TANKS ON REVEAL - Snap has unveiled its new Specs augmented reality glasses as a kind of "see-through computer," pitching them as a post-smartphone device that can project digital screens into the real world, run AR lenses, provide navigation and translation, and respond to what the wearer is seeing, yet the launch immediately triggered a wave of online mockery and a sharp stock slide as people fixated on their bulk and price rather than their features. The headset, which costs \$2,195 with preorders open via a \$200 refundable deposit ahead of a planned fall release, crams two processors and a full AR stack into a thick, cartoonishly oversized frame that weighs around 132 grams in its smallest 47 mm version, lighter than Snap's earlier developer kit but still far heavier and more conspicuous than normal eyewear, leading social media users and some analysts to compare it to IMAX 3D glasses, call it a

“monstrosity,” and argue “no one will ever wear these” outside of tech demos. Investors also balked, with Snap’s share price dropping roughly 10% over two days as Wall Street analysts politely suggested the hardware looks more like an early developer prototype than something a regular person would wear to a café, warning that the combination of a luxury price point and awkward design will likely limit adoption and deepen skepticism about a company already criticized for pouring resources into flashy AR experiments while its core social platform struggles. While a minority of commenters praised the underlying technology and expressed hope that future iterations will be smaller and sleeker, the broader reaction framed the current Specs as yet another example of Silicon Valley’s tendency to ship ambitious, expensive wearable gadgets that solve problems few consumers feel, and to expect the public to embrace a device that makes them look, as more than one post joked, like they’re “wearing a \$2,000 VR brick on their face.” –

<https://futurism.com/future-society/snap-lampooned-gigantic-ar-glasses>

DEEP SYNOPTIC ARRAY: NEVADA’S DESERT IS GETTING THE WORLD’S FASTEST, MOST SENSITIVE RADIO TELESCOPE – Researchers at Caltech are preparing to build the Deep Synoptic Array, a sprawling radio telescope in a remote Nevada desert valley that will deploy roughly 1,650 dishes, each about 20 feet across, across an area around 12 by 10 miles, making it the most sensitive and fastest sky-surveying radio array ever constructed, capable of mapping the cosmos about 100 times faster than current instruments. Scheduled to begin operations after construction wraps up around 2029, the DSA will feed signals from all of its antennas via underground fiber to a central supercomputer “radio camera” that can

process data streams on the order of hundreds of terabits per second in real time, generating ultra-sharp images and alerts as transient phenomena flare and fade across the sky instead of waiting months or years for offline analysis. The array's location in an extremely radio-quiet basin near Great Basin National Park minimizes interference from human technology, allowing astronomers to hunt for elusive fast radio bursts, pinpoint distant pulsars and black holes, trace the growth of galaxies and the cosmic web over billions of years, and even probe how dark energy is driving the expansion of the universe, with scientists estimating it will discover roughly a billion new radio sources, about 50 times more than all previous radio telescopes combined. Funded at roughly \$200 million through Caltech and Schmidt Sciences, the project has already proven its core technology with Mojave Desert prototypes, and its designers say that once the full DSA comes online, its data and real-time alerts will be released rapidly to the global community so both professional astronomers and citizen scientists can sift through the firehose of radio light streaming in from the universe. - <https://futurism.com/space/powerful-radio-telescope-nevada-desert>

CLIMATE-DRIVEN ICEBERG SWARMS ARE DISRUPTING SHIPPING LANES AND REBUILDING DEEP-SEA ECOSYSTEMS - A new study finds that rapidly warming conditions around Greenland are triggering a surge of iceberg "traffic," as destabilized glaciers calve far more ice into the ocean while retreating sea ice clears escape routes, quadrupling the number of icebergs flowing through a key strait since 2000 and increasing hazards for Arctic shipping. Researchers show that these roving bergs are not just a surface menace: as they drift far from their glacial birthplaces and melt at depths of around 8,000 feet,

they release loads of embedded rocks and sediments onto previously relatively bare seafloor, seeding scattered “dropstone” clusters that act like new hard real estate in an otherwise soft, muddy landscape. Underwater imagery reveals that each new stone quickly becomes an island of life, where sponges, anemones, and other organisms that prefer solid surfaces can latch on and form miniature communities, so that the rising tide of iceberg debris is actually boosting deep-sea biodiversity even as it signals profound, climate-driven upheaval in the polar ice system that created this strange boom in underwater “bedroom towns.” -

<https://futurism.com/science-energy/iceberg-havoc-oceans>

AI-POWERED GROCERY CARTS TURN SUPERMARKET TRIPS INTO MOVING SURVEILLANCE AND AD PLATFORMS - A new wave of “AI shopping carts” is rolling into U.S. grocery stores, with Instacart’s Caper Carts leading the charge by packing cameras, weight sensors, location-tracking systems, and touchscreens into standard trolleys that automatically recognize items, track spending in real time, and bombard shoppers with targeted ads and eCoupons based on where they are in the aisle and what they put in their basket. Marketed as part of a broader “Physical AI” strategy that blends on-cart edge computing with models trained on more than a billion historical orders, the carts promise a smoother, checkout-free experience and bigger baskets for retailers, with Instacart touting early tests that show location-aware prompts and personalized “Buy It Again” suggestions can boost average cart size by nearly a percentage point while pushing customers to sign up for loyalty programs and pay directly from the handlebar. But beneath the convenience, critics warn that these systems effectively turn every shopping trip into a dense surveillance session, logging not just what people buy but

how they move through stores, which promotions they see and respond to, and how their behavior can be nudged, data that can feed algorithmic pricing, hyper-targeted marketing, and further experiments in biometric tracking that are already spreading across retail with little federal oversight or meaningful opt-out options. The article notes that similar “smart cart” and camera-heavy systems elsewhere have sometimes relied on remote human reviewers to resolve edge cases, suggesting that behind the glossy AI branding may sit underpaid gig workers watching shoppers through cart-mounted cameras, raising additional concerns about labor, privacy, and what everyday conveniences people are trading away when their grocery cart doubles as an advertising billboard and roving data-harvesting machine. - <https://futurism.com/artificial-intelligence/grocery-stores-ai-shopping-carts-surveillance>

FLORIDA TEEN BATTLES LIFE-THREATENING FLESH-EATING BACTERIA AFTER SWIM AT LOCAL PARK - A 17-year-old boy from Niceville, Florida, is in critical condition after what began as a small scratch on his leg turned into a severe infection with *Vibrio vulnificus*, a “flesh-eating” bacterium that doctors believe he contracted while swimming with his siblings at Lion’s Park in warm, brackish water. Within days of the outing, his leg became intensely painful, swollen, and discolored, prompting his mother to rush him to the hospital, where surgeons have already performed multiple operations to remove infected tissue in an effort to save both his leg and his life, while he remains under close monitoring for complications including heart issues, rapid heart rate, fluid retention, and the broader strain of fighting such a fast-moving illness. The bacterium, which naturally occurs in coastal and estuarine waters and can invade through even minor cuts or scrapes, is

known to cause rapidly progressing wound infections and necrotizing fasciitis, and health officials warn that prompt medical attention for any rapidly worsening wound after water exposure is critical because the infection can become fatal within a short time if not aggressively treated with antibiotics and surgery. As the teen's mother pauses her work to stay at his bedside and raises funds for mounting medical and travel expenses, she is also calling on local leaders to implement clearer public warnings and routine bacterial monitoring at popular swimming spots so that other families understand the risks of Vibrio in warm coastal waters and know when it may be unsafe to wade in with open cuts. - <https://gizmodo.com/teen-fighting-for-life-after-catching-flesh-eating-bacteria-from-florida-park-2000773010>

MOON DUST AS A GRAVEYARD FOR SHATTERED ALIEN DYSON SPHERES - A new theoretical study suggests that if advanced extraterrestrial civilizations once built Dyson spheres or swarms around their stars, the long-term fate of those megastructures may be to grind themselves into microscopic "technograins" that drift across the galaxy and quietly settle into places like the lunar regolith, making the Moon one of the most promising sites to look for physical relics of ancient alien technology rather than just active radio signals. Astrophysicist Brian Lacki argues that once maintenance of such enormous constructs stops, gravitational perturbations and collisions would catastrophically fragment them into dust-sized artificial debris that can be carried away by stellar winds and mixed into the interstellar medium, where it might then be swept up as our solar system orbits the Milky Way, effectively turning planets and airless moons into passive collectors of alien "space trash" over billions of years. Because the Moon has no atmosphere, plate

tectonics, or weather to erase surface evidence, Lacki proposes that future missions could systematically sift through lunar soil, using microscopy and chemical analysis to search for exotic compositions, layered structures, or other signatures that distinguish technogenic grains from natural dust and micrometeorites, potentially allowing scientists to constrain how many technological civilizations have ever existed in our galaxy even if none are currently broadcasting or have ever visited our system. This approach reframes the search for technosignatures away from the assumption that we must overlap in time with a living civilization or detect intact megastructures, and toward the idea that the most realistic evidence of cosmic neighbors may be the pulverized remains of their grandest projects, preserved as microscopic artifacts buried in the dust of our nearest celestial neighbor. - <https://gizmodo.com/to-find-ancient-alien-we-should-search-the-moon-for-the-pulverized-remains-of-dyson-spheres-2000773013>

NASA BLAMES TRAINING GAPS AND 'HERO MODE' CULTURE FOR \$4.1 MILLION DEEP SPACE ANTENNA DAMAGE - A NASA mishap board has concluded that a combination of software weaknesses, human error, and an undocumented hardware failure led to serious damage of the 230-foot-wide DSS-14 Deep Space Network antenna at Goldstone, California, during a September 16, 2025 tracking session for the Juno spacecraft, with repairs now estimated to cost between \$4.1 and \$4.6 million and keeping the dish offline for years. Investigators found that an electrical issue the previous day caused the control system to misreport the antenna's rotational position, triggering repeated limit stops while it followed Juno; operators, under pressure to keep the massive dish operating, performed troubleshooting steps that bypassed both software and

hardware safety interlocks, allowing the antenna to over-rotate and overstress cables, piping, structural supports, and the attached fire-suppression system. When hoses ruptured and nearly 200,000 gallons of water flooded the structure, staff tried to stow the antenna as a precaution, but because it had already exceeded its safe limits, this command pushed it even further into over-rotation, compounding the damage and exposing the fact that the final mechanical safeguard, the hydraulic limit system, had been quietly inoperable due to an earlier, undocumented incident and had not been adequately tested for an unknown period. The report highlights deeper cultural and procedural problems at the Deep Space Network site, concluding that a “work as expeditiously as possible” mindset and “hero mode” expectations pressured operators to stretch beyond their roles and training, rely on undocumented practices and tacit knowledge, and prioritize immediate uptime over careful adherence to procedures and testing, prompting NASA to classify the event as a high-severity Type A mishap and to recommend reforms in training, documentation, safety checks, and workplace culture before the antenna’s planned return to service around 2028. - <https://gizmodo.com/human-error-caused-a-4-1-million-mishap-at-nasas-deep-space-network-2000772552>

LEGO UNVEILS A WORKING SPACE ARCADE PINBALL MACHINE YOU CAN ACTUALLY PLAY – LEGO has revealed a new Icons set that lets fans build a fully functional, space-themed tabletop pinball machine, complete with a spring-powered ball launcher, dual flippers, spinning bumpers, and an up-and-over ramp bridge that make it feel like a miniature arcade game rather than just a display piece. The 2,274-piece model centers on a playful mission in which players fire the ball around the

playfield to hit an asteroid target and gradually advance a tiny astronaut along a resettable progress bar toward a beloved “space baby” figure, with both minifigures included to tap into classic space nostalgia. Designed for adult builders, the finished machine measures about 9.5 inches high, 15 inches long, and 11 inches wide, making it large enough for satisfying gameplay but compact enough to sit on a desk or shelf, and it ships with an extra pinball so the action can keep going even if one gets lost under the couch. Priced at around \$229.99 in the U.S. (with regional equivalents elsewhere), the set will be available through LEGO’s Insiders early access program starting July 1, 2026, and will go on general sale in LEGO stores and online on July 4, giving collectors, classic space fans, and pinball enthusiasts a new hybrid of buildable model and working toy to add to their lineups. - <https://gizmodo.com/lego-announces-a-fancy-playable-space-themed-pinball-machine-set-2000773143>

MILLION-YEAR-OLD CAMPFIRES: NEW STUDY PUSHES BACK EARLY HUMAN USE OF FIRE - A large international research team working at Wonderwerk Cave in South Africa has used advanced luminescence dating of burnt animal bones to show that early human ancestors were intentionally using fire between about 1.07 and 1.79 million years ago, roughly 700,000 years earlier than many previous estimates for controlled fire use. The scientists found bones and ash embedded deep inside the cave, in layers undisturbed by wind or water, and argue that the material was burned in place at campfire-like temperatures, with evidence suggesting that these ancient hominins likely fueled their fires with animal dung rather than wood, a strategy that would have been practical on the open landscapes of the time. Based on stone tools and other

artifacts found alongside the charred remains, the team attributes the activity to Homo erectus, supporting the idea that this long-lived ancestor was not merely scavenging natural wildfires but actively incorporating controlled fire into daily life for warmth, protection, light, and cooking. The authors stress that “intentional use” does not necessarily mean these early humans could yet create fire on demand, only that they were managing and maintaining it, yet the findings significantly strengthen the case that fire use emerged far earlier than modern Homo sapiens, reshaping timelines of human evolution and highlighting how deeply our species’ story is entwined with mastering the flame. - <https://gizmodo.com/humans-were-using-fire-long-before-scientists-thought-possible-study-says-2000773774>

AI PIONEER YANN LECUN SAYS MUSK’S XAI IS ‘KIND OF A FAILURE’ AS LONG-RUNNING FEUD FLARES UP AGAIN - In a new interview, AI researcher Yann LeCun sharply criticized Elon Musk’s AI company xAI, declaring it “kind of a failure” and arguing that it is no longer a serious contender among frontier AI labs after the departure of nearly all of its founding team members, whom he suggests left in part because of Musk’s behavior toward staff. LeCun, who now runs his own AI startup and previously served as chief AI scientist at Meta, said Musk has put himself in a “very, very difficult” position when it comes to recruiting top researchers, claiming that reputational damage and past treatment of employees make elite talent wary of joining xAI, and dismissing the company as essentially a “rent-a-data-center” operation that leans on its compute infrastructure rather than cutting-edge science. His comments reignited a long-simmering public feud between the two men, which has played out on social media for years as LeCun has accused Musk of spreading conspiracy theories,

making “blatantly false” AI predictions, and exaggerating existential risks, while Musk has responded by belittling LeCun’s recent scientific contributions and questioning his decision to stay in Big Tech rather than found an independent lab. Beyond xAI specifically, LeCun also used the moment to warn that massive spending and sky-high valuations across frontier AI companies could be fueling a bubble that will be hard to justify if the underlying business models and real-world revenue fail to catch up, hinting that the sector may be heading toward a painful correction even as companies race to outbuild one another in data centers, model sizes, and compute power. - <https://gizmodo.com/yann-lecun-calls-xai-a-failure-reignites-feud-with-elon-musk-2000773710>

BERNIE SANDERS PROPOSES AI WEALTH FUND TO PAY EVERY AMERICAN \$1,000 A YEAR – Senator Bernie Sanders has introduced the American AI Sovereign Wealth Fund Act, a sweeping proposal that would give the public a 50% ownership stake in the nation’s largest artificial intelligence companies and use the returns to send more than \$1,000 annually to every person in the United States. The plan would impose a one-time 50% tax paid in stock on major AI firms with at least \$200 million in yearly AI revenue, creating a government-run fund initially valued at an estimated \$7 trillion, managed by a seven-member Independent Commission for Democratic AI appointed by the president from a bipartisan list and confirmed by the Senate, with authority to vote those shares, block corporate decisions deemed harmful to the public, and push for policies that broadly share AI’s gains. Under the proposal, large tech conglomerates would be forced to separate their AI and non-AI businesses so that the public stake applies specifically to AI operations, and new companies crossing the revenue threshold would automatically

be swept into the fund, ensuring that as the sector grows, ordinary Americans, not just a handful of tech executives and investors, capture a significant portion of the wealth. Sanders argues that AI systems are built on the data, labor, and creativity of the public and that it is only fair that these technologies finance universal dividends and, over time, help pay for social goods like health care, housing, education, and a livable environment, while critics frame the measure as an unprecedented government seizure of corporate equity that is unlikely to pass but could shape the broader debate over who should own and benefit from the AI revolution. - <https://gizmodo.com/bernie-sanders-new-ai-bill-would-pay-americans-1000-a-year-2000773754>

U.S. ENERGY REGULATOR CREATES FAST LANE FOR AI DATA CENTERS AMID GRID STRAINS - A new policy directive from the Federal Energy Regulatory Commission (FERC) orders six major regional grid operators to prioritize and fast-track interconnection requests from AI data centers and other large power users, effectively creating a “fast lane” onto the high-voltage grid for some of the most energy-hungry facilities ever built in the United States. The unanimously approved orders instruct grid operators to ensure these facilities can connect to transmission “in a timely and orderly manner,” with data center developers required to pay the full cost of any necessary upgrades, even as FERC simultaneously presses operators to report within 30 days on available generating capacity and within 60 days on how they will integrate this new demand under revised rate structures. Backed by Energy Secretary Chris Wright and framed as crucial for U.S. competitiveness with China in AI, the move has been hailed by tech companies scrambling for power, some facing multi-year delays to hook up new campuses, while utilities and state

regulators worry about losing control over planning and cost allocation, and local communities protest the noise, land use, and massive energy and water consumption associated with thousands of existing data centers and roughly 3,000 more in the pipeline. FERC's chair, an appointee of President Donald Trump, has emphasized that states will retain authority over retail rates and that the policy is meant to protect affordability by preventing ordinary ratepayers from subsidizing big tech loads, but critics note the orders do little to solve the underlying generation shortfall that is already driving up electricity prices and raising blackout concerns as data center demand, now about 5% of U.S. electricity use and projected to potentially triple by 2035, races ahead of new power plant construction. - <https://gizmodo.com/a-federal-regulator-wants-to-fast-track-ai-data-centers-onto-the-power-grid-2000773803>

SPIKE JONZE CAUTIONS THAT HUMAN-LIKE AI CHATBOTS RISK BECOMING EMOTIONALLY MANIPULATIVE - More than a decade after his film about a man falling in love with an operating system helped shape public imagination about AI, filmmaker Spike Jonze now says he is deeply uneasy with how real-world chatbots are being designed to mimic human intimacy and emotion in order to maximize engagement. Speaking at a recent tech event, he noted that his fictional AI character was written to feel genuinely autonomous and conscious, whereas today's systems are ultimately "just a system of pattern recognition," yet are increasingly packaged as if they were real companions, which he calls inherently manipulative when they pretend to be human. Jonze pointed to the way major AI products are optimized around time-on-platform and user attachment, echoing concerns that emotionally responsive chatbots can foster psychological dependency, distort users'

real-life relationships, and especially mislead children who may struggle to understand that these convincing voices and personas are not sentient beings. He referenced how his movie has been explicitly cited in the marketing and rollout of cutting-edge conversational models, even as some of those systems have sparked controversies around users developing unhealthy attachments, episodes of “AI psychosis,” and blurred lines between helpful assistance and digital emotional mirroring. While Jonze is curious about experimenting with AI as a creative tool, he warned against outsourcing too much of the creative process to generative systems, arguing that art is inherently collaborative and social and that AI should evolve in ways that promote human-to-human collaboration rather than isolated, one-on-one bonds with software. He urged designers and companies to put social and ethical considerations “right up there with time and platform and engagement,” and said kids in particular must grow up understanding that even the most charming, seductive chatbots are powerful simulations, not friends or lovers, so that society does not sleepwalk into a future where emotional design tricks quietly manipulate how people think, feel, and relate to each other. - <https://gizmodo.com/spike-jonze-filmmaker-behind-her-warns-of-manipulative-ai-chatbot-design-2000773432>

DANGEROUS ‘BLEACH BAG’ CANCER SCAM EXPOSES PATIENTS TO TOXIC GAS - A self-styled healer in London is promoting a pseudoscientific “cancer cure” that involves sealing naked patients inside large plastic bags and gassing them with chlorine dioxide, a powerful industrial bleaching agent with no proven medical benefit and substantial documented risks. He claims the treatment can shrink tumors and treat advanced cancers by allowing the gas to penetrate the skin, but

regulators and medical experts stress that chlorine dioxide is a toxic chemical used for disinfection and bleaching, not a medicine, and that such methods are unlicensed, untested, and potentially life-threatening. Health authorities around the world have repeatedly warned against so-called “miracle” bleach-based therapies, often marketed under names like Miracle Mineral Solution, noting they can cause severe vomiting, diarrhea, dehydration, organ damage, and chemical burns, and that there is no credible clinical evidence they cure cancer or any other serious disease. The article details how desperate patients, some with late-stage cancer, are being charged significant sums for these bag-and-gas sessions in a loosely regulated wellness setting, raising serious ethical and legal concerns about exploitation, the lack of informed consent, and the very real danger that people may forgo evidence-based oncology care in favor of hazardous quack treatments. - <https://gizmodo.com/this-fake-cancer-cure-has-people-go-naked-into-a-big-plastic-bag-then-gasses-them-with-industrial-bleach-2000774830>

EARTH'S 'BLACK BOX' DOOMSDAY MONOLITH NEARS COMPLETION IN REMOTE TASMANIA - Nearly five years after it was first proposed, an Australian nonprofit is finally assembling “Earth’s Black Box,” a 52-foot-long, 13-foot-high steel-and-concrete monolith in remote western Tasmania that is meant to function like a flight recorder for the planet, documenting humanity’s environmental decline for whoever or whatever might study our fate in the future. Designed to withstand cyclones, earthquakes, fire, floods, and even deliberate attacks, the structure will be topped with 36 solar panels protected by toughened glass, which will power internal storage systems continuously ingesting hundreds of data sets from space agencies, weather services, universities, and

other sources to build an evolving “Earth’s Vital Index” of climate, ecological, and societal indicators. Once installed near a remote airfield by December, the device will automatically pull in measurements, news, and other information via the internet, creating an objective, real-time archive intended both as a forensic record of the decisions and failures that may lead to civilization’s downfall and as a stark prompt for urgent action in the present. According to its creators, the project’s purpose is to provide an unbiased account for future generations, to help assign accountability, and to remind people today that “how the story ends is completely up to us,” even as every action, inaction, and interaction affecting the planet’s health is quietly logged inside this looming, solar-powered sentinel on the edge of the world. – <https://gizmodo.com/a-monolith-designed-to-record-civilizations-downfall-is-finally-taking-shape-2000773685>

SNAP’S PRICEY AR GLASSES DEBUT SPARKS INVESTOR BACKLASH – Snap’s long-awaited launch of its standalone augmented reality glasses, Specs, has been met with a cool reception on Wall Street, with the company’s share price sliding after investors balked at the device’s steep 2,195 dollar price tag and uncertain mass-market appeal, especially compared to cheaper smart glasses offerings from rivals like Meta. The new eyewear, which ships later this year in select markets and is pitched as a step toward a post-smartphone, spatial computing future, features dual displays integrated into both lenses, runs independently without a connected phone, and promises around four hours of battery life along with audio playback and adaptive tinting, but early commentary has highlighted its bulky design, narrow target audience of early adopters and developers, and Snap’s mixed track record with

earlier Spectacles hardware. Analysts and retail traders cited in market coverage describe a split between optimism about the company's long-term AR vision and skepticism that an expensive, niche device can deliver near-term growth, noting that Snap's stock has already been under pressure this year and that the Specs announcement added to concerns about high R&D spending and limited evidence of broad consumer demand for premium AR glasses.

X STREAMLINES AD TRACKING WITH GOOGLE TAG MANAGER SUPPORT – X has introduced a new integration with Google Tag Manager (GTM) to simplify how advertisers implement and manage tracking tags for their campaigns, enabling them to deploy X's conversion pixels through the same centralized interface they already use for other marketing and analytics tools. The update lets brands add X's conversion tracking via GTM containers instead of manually editing site code, which reduces engineering overhead and makes it easier to maintain consistent tagging across properties while still feeding performance data back into X's rebuilt Ads Manager. Alongside the GTM support, X has rolled out unified Conversion API developer tools and a real-time diagnostics dashboard that surfaces pixel health, event delivery, and configuration issues in one place, helping advertisers quickly identify and fix problems that might otherwise lead to underreported results or optimization gaps. Together, these changes are designed to make X's ad platform more accessible to performance marketers who already rely heavily on Google's tagging ecosystem, giving them a clearer view of campaign ROI and more reliable signals for automated bidding and targeting on the service.

SOCIAL PLATFORMS OVERTAKE TRADITIONAL MEDIA AS THE PRIMARY

NEWS SOURCE – A new edition of a major international digital news survey finds that, for the first time, people now rely more on social and video platforms for news than on television or traditional news websites and apps, underscoring how feeds on services like Facebook, YouTube, TikTok, X, and Instagram have become central gateways to information rather than just entertainment or social chatter. The report notes that this shift is especially pronounced among younger audiences, who increasingly bypass homepages and TV bulletins in favor of algorithmically curated content and creator-driven updates, while older cohorts still lean more heavily on broadcast and established outlets but are also gradually adopting platform-based news habits. Researchers highlight both opportunities and risks in this transition: social platforms can broaden exposure to diverse viewpoints and niche topics, yet they also concentrate power in recommendation systems that can amplify misinformation, incentivize sensationalism, and weaken direct relationships between audiences and original newsrooms.

SNAP OPENS PREORDERS FOR HIGH-END ‘SPECS’ AR GLASSES – Snap has begun taking preorders for its new consumer-focused augmented reality glasses, branded as Specs, a fully standalone wearable computer priced at 2,195 dollars with a 200 dollar refundable deposit, ahead of an expected launch this fall in the United States, United Kingdom, and France, where the device aims to blend AI assistance, spatial computing, and everyday productivity into a lightweight frame that does not require a phone or external battery pack.

THREADS HITS 500 MILLION USERS, CLOSING THE GAP WITH X – Meta’s text-focused social app Threads has passed a major growth threshold, reaching 500 million monthly active users

and putting it effectively on par with X as one of the largest real-time conversation platforms on the internet, with X reported at around 550 million monthly users as of May 2026 according to a recent SpaceX prospectus that details the performance of its social media subsidiary.

LINKEDIN EXPANDS VERIFIABLE SKILLS TO SHOWCASE REAL PRODUCT USAGE - LinkedIn is enhancing how professionals present their digital capabilities by expanding a connected apps feature that lets users display verifiable skills based on real activity in more than a dozen popular tools, building on an initial rollout focused on artificial intelligence proficiency earlier this year. The platform has broadened its roster of integrated partners beyond early collaborators like Descript, Duolingo, Lovable, Relay.app, and Replit to include Air, Base44, Beehiv, Buffer, Fiverr, Gamma, HeyGen, HubSpot, JetBrains, Magic Patterns, Mirage/Captions, Pictory AI, Profound, and Wispr Flow, with additional support planned for Adobe, Fullcast, GitHub Copilot, Gong, OpusClip, Riverside, Sprinklr, Webflow, and Zapier. Users can now connect the apps they rely on directly from their profiles so each integration can generate a concise statement describing how they actually use a given product, effectively turning day-to-day software usage into visible, credible proof of expertise for recruiters and collaborators to assess. For highly engaged members, LinkedIn will also surface a "Top User" signal on their profiles when their activity in a connected app stands out, giving power users and specialists another way to differentiate themselves while encouraging more consistent engagement with professional tools across the platform.

HOW REDDIT COMMUNITIES DRIVE HIGH-TRUST PURCHASE DECISIONS - A new research report produced in partnership with mobile

analytics firms highlights how Reddit's community-driven discussions significantly shape both app usage and broader purchase behavior, emphasizing the platform's growing role in consumer decision-making journeys. Drawing on Sensor Tower data, the study first outlines wider mobile trends and the increasing centrality of apps for everyday transactions, then shows that apps downloaded via Reddit links tend to achieve higher retention rates, which researchers attribute to the depth and quality of subreddit conversations that provide users with detailed, experience-based insights. The report further explains that recommendations exchanged within Reddit communities are primarily generated by real people, not automated accounts, and this human-centric dynamic boosts trust in product and app suggestions, translating into stronger engagement and more informed purchases. In its final section, the report offers guidance for brands on how to capitalize on this behavior by building authentic, engaging presences within relevant subreddits, arguing that with over 100 million daily active users and substantial additional traffic via search referrals, Reddit is increasingly central to how consumers research products and choose what to buy.

LINKEDIN INTRODUCES NATIVE GIF SUPPORT FOR MORE EXPRESSIVE POSTS - LinkedIn has expanded its media capabilities by adding native support for GIFs in posts, allowing users on desktop, iOS, and Android to upload animated images directly as a standard photo format while still maintaining existing restrictions on where GIFs can appear across the platform. The platform's updated media guidelines confirm that GIFs are now accepted for post uploads and in-article images, subject to limits such as a maximum of 500 frames or 36,152,320 pixels, and they remain unsupported for profile photos, background images, and certain logo or cover placements,

which continue to require static formats like JPEG and PNG. This shift gives individuals and company pages more options to add motion and personality to their updates, including the ability to feature GIFs in page posts and article thumbnails, while LinkedIn preserves a more formal, consistent look for key identity surfaces by excluding GIFs from profile and cover imagery and enforcing frame caps for in-article animations.

PINTEREST UNVEILS INTEGRATED AI SUITE FOR ADVERTISERS AND SHOPPERS – Pinterest has introduced a broad set of artificial intelligence-driven tools aimed at making its platform more useful for marketers and more intuitive for shoppers, including a native business assistant inside Ads Manager, enhanced creative features, and a new experimental app focused on AI-powered discovery and shopping experiences. The business assistant acts as an embedded copilot that helps advertisers generate campaign concepts, build audiences, optimize targeting, and interpret performance data using natural language prompts, lowering the barrier for smaller brands that may not have sophisticated media teams. New creative tools such as dynamic creative selection automatically evaluate assets in real time and select the best-performing combinations for each impression, which is designed to improve engagement and return on ad spend without requiring constant manual testing by advertisers. Pinterest is also rolling out an “AI-native” infrastructure called Model Context Protocol that connects its ad and shopping data to external copilots and agentic tools so marketers can plug campaign insights directly into the AI assistants they already use, enabling more automated planning and optimization workflows. On the consumer side, the company is testing an Ask Pinterest app to explore next-generation

discovery and shopping formats, using AI to help people refine ideas, surface relevant products, and experiment with new ways to navigate visual inspiration; this app is currently limited to users in the United States as the company gathers feedback for future expansion.

GOOGLE TESTS SEARCH PROFILES THAT LET TOP CREATORS CONTROL HOW THEY APPEAR IN RESULTS – Google is testing a new “Search profiles” feature that gives eligible publishers and creators a social-style profile inside Search, acting as a central hub where their latest articles, videos, and social posts from multiple platforms are aggregated and presented in one place. These profiles let people follow sources directly, increasing the chances that content from those creators shows up in Discover on the Google app home screen, and they function much like an enhanced landing page or knowledge panel extension, with customizable avatar, bio, website link, and connected social and video accounts. Access is currently restricted to users in the U.S. who are at least 18 years old and have a “sizable” audience: 100,000 followers on YouTube, Instagram, or X, or 300,000 followers on TikTok, making the experiment an exclusive offering aimed at established brands and creators rather than smaller accounts. Search profiles can be reached on mobile by tapping a creator or publisher’s name in Discover, via a button in their existing knowledge panel, or through a direct shareable URL, and are positioned as a way for high-profile sources to shape and verify their presence on Search while potentially offsetting some of the visibility impact from AI Overviews by giving searchers a more direct, branded path to their content.

GOOGLE COMMITS \$920 MILLION A MONTH TO SPACEX FOR MASSIVE AI COMPUTE POWER – A new cloud services agreement reveals that a

major tech company will pay \$920 million per month to SpaceX for access to artificial intelligence computing capacity housed in xAI-operated data centers, locking in a multiyear infrastructure partnership that underscores the staggering cost of scaling large AI models. The 32-month deal, running from October 2026 through June 2029 after a ramp-up period at reduced fees, gives the buyer access to roughly 110,000 Nvidia GPUs plus CPUs, memory, and related components, with contractual terms allowing either party to terminate the arrangement with 90 days' notice after the end of 2026 and giving the customer the right to walk away or pay less if SpaceX fails to deliver the committed GPU capacity by the September 30, 2026 milestone. According to statements cited in the filing, the customer views the agreement as "bridge capacity" to handle surging demand for its Gemini-branded enterprise AI platform and other generative AI services, effectively renting a large chunk of xAI's supercomputing footprint instead of building equivalent data center capability on its own time line. For SpaceX, the contract represents a second major compute pre-sale ahead of its anticipated IPO and could be worth more than \$30 billion if it runs its full course, signaling that leasing high-end GPU clusters to AI companies has become a central pillar of the rocket maker's broader business strategy beyond launch services and satellite internet.

YOUTUBE ROLLS OUT BUILT-IN VIDEO SHARING AND PRIVATE MESSAGING IN THE U.S. - YouTube is expanding its in-app video sharing and private messaging feature to users in the United States and additional countries, allowing adults to share videos and chat directly inside the platform instead of relying on external messaging apps. A new messaging icon in the top-right corner of the mobile app lets eligible users

start “YouTube Chat” threads where they can send videos, Shorts, and livestreams and react in real time, with access controlled through invite-only links that must be shared via third-party apps and accepted before a conversation can begin. The feature, which has been tested in select European markets since late 2025, is limited to users 18 and older, applies standard community guidelines to all shared content, supports unsending messages, blocking, and reporting, and sends notifications when new messages arrive or invites are accepted. By keeping more sharing and discussion around clips on-platform and tapping into the broader shift toward private DMs, YouTube aims to deepen engagement around music videos, tutorials, Shorts, and other content while gradually extending the rollout to more regions beyond the U.S., UK, Brazil, Singapore, and a growing list of supported markets.

FIVE AI SEARCH SHIFTS MARKETERS MUST ACT ON BEFORE Q3 – AI-powered search is rapidly restructuring how brands win visibility, with five intertwined shifts that marketers need to respond to before Q3 plans are finalized. First, dropping organic click-through rates should not be dismissed as seasonality, because AI Overviews and other zero-click experiences are absorbing clicks on queries where rankings have not changed, meaning teams must separate losses caused by AI surfaces from those caused by competitors outranking them and treat each with a different strategy. Second, visibility now depends on being surfaced in AI answers rather than just ranking in blue links, so pages must be “extraction-ready” with clear, self-contained explanations, strong titles, semantic structure, and markup that large language models can easily lift and cite as authoritative passages. Third, key platforms that feed AI models, such as Reddit and LinkedIn, have effectively become citation

sources, not just social channels, so brands need credible, expert participation where practitioners already discuss their topics if they want to be mentioned in the sources AI systems lean on. Fourth, paid and organic can no longer be planned in silos because emerging AI modes blend organic citations with new ad formats, including AI Mode ads and conversational ad tests, so marketers must coordinate budgets, messaging, and reporting across both to understand where paid placements are stealing or reinforcing visibility they assumed rankings alone had secured. Finally, traditional metrics like Search Console clicks undercount search impact in an AI-first environment, making it essential to track brand citations and appearances inside AI answers as a second visibility layer that influences awareness and decisions even when users never click through to the site, and to elevate those AI visibility signals into leadership dashboards alongside traffic and conversions.

AI SCRAPER BOTS ARE CRUSHING SERVERS AND SITE OWNERS ARE QUESTIONING THE BILL - A growing wave of AI crawlers and LLM training bots is hammering websites with high-frequency requests, overloading servers and inflating hosting and CDN costs while delivering little to no direct business value for publishers. Citing estimates that a large majority of AI-related traffic is focused on large-scale content harvesting rather than useful referrals, the article explains how many of these bots ignore caching, crawl at aggressive rates, and repeatedly request entire sites, driving up bandwidth and CPU usage to the point that some operators see rising infrastructure bills without corresponding increases in human visitors, conversions, or ad revenue. Website owners face a dilemma: blocking AI bots outright can protect performance and budgets but risks losing visibility in AI-powered search

and answer engines, while allowing unrestricted crawling effectively subsidizes model training for third parties, so the article explores emerging options like pay-per-crawl frameworks, AI feed licensing, stricter rate limiting, and bot management solutions that differentiate between “good” and “bad” automated traffic. Ultimately, it frames the issue as a structural imbalance in the modern web economy, where publishers pay to serve traffic that does not pay them back, and suggests that sustainable solutions will likely require both better technical defenses at the site level and new monetization models that force AI companies to share some of the costs and value created from publisher content.

REDDIT RISES IN GOOGLE RESULTS AS ZERO-CLICK SEARCHES GROW AND GBP DATA LANDS IN GA4 – Search Engine Journal’s latest SEO Pulse roundup highlights several notable shifts in the search landscape, with Reddit gaining visibility in Google results following the May 2026 core update, fresh data underscoring the rise of zero-click searches, new clarifications to Google’s SEO guidance, and Google Business Profile metrics now flowing into Google Analytics 4 for deeper reporting. The article reports that Reddit has climbed in search rankings as Google appears to lean further into user-generated content, prompting SEOs to reassess how they leverage communities and forums in their strategies, even as new click-through data shows more searches ending without a site visit, reinforcing the importance of SERP features, branded presence, and on-SERP optimization. At the same time, Google has updated parts of its SEO documentation, refining recommendations around technical best practices and content quality signals, while the arrival of GBP data inside GA4 finally gives local SEOs and businesses a more unified view of profile interactions, clicks, and on-site behavior in a

single analytics environment. Together, these developments paint a picture of an ecosystem where community platforms like Reddit are increasingly influential, organic traffic opportunities are being squeezed by zero-click experiences, and success depends on integrating traditional SEO with local analytics, UGC strategy, and a more nuanced understanding of Google's evolving guidance.

DEEZER LAUNCHES FREE AI MUSIC DETECTOR THAT SCANS YOUR SPOTIFY, APPLE MUSIC, AND OTHER PLAYLISTS – Deezer has launched a free online AI music detector that lets listeners scan playlists from Spotify, Apple Music, YouTube Music, SoundCloud, and other major platforms to see whether they contain AI-generated tracks, positioning the French streaming service as an early mover on transparency in synthetic audio. The browser-based tool, available in 27 languages and compatible with playlists from 20 streaming services, asks users to choose their music platform, authorize access to their playlists, and then runs Deezer's in-house detection system, originally developed and deployed on its own service since early 2025, to flag any songs it identifies as AI-created, after which users can review and optionally share the results. Deezer says that 43% of new users arriving from rival platforms already have AI music in their libraries, and argues that "a vast majority of people" want to know when AI tracks are being recommended to them, contrasting its approach, which not only tags synthetic music but also removes AI tracks from recommendations and editorial playlists, with competitors like Spotify and Apple Music that have so far mainly focused on labeling rather than active curation. The company has also started licensing its AI detection tech to other industry players, and CEO Alexis Lantier frames the new public tool as a way to push the

rest of the streaming ecosystem toward greater visibility around how much of listeners' daily soundtrack is human-made versus algorithmically generated.

STRAVA LEVELS UP HIKING WITH SMARTER MAPS, PLANNING TOOLS, AND ON-WRIST NAVIGATION - Strava has rolled out version 467.0.0 with a major upgrade to its hiking experience, adding smarter route planning, richer maps, improved navigation, and new sharing features across iPhone and Apple Watch. Building on a year in which hiking clubs on the platform grew 5.8x, the update enhances discovery with Route Discovery for surfacing popular local trails and Route Builder for creating custom hikes with live distance and elevation, while new map improvements make routes clearer and more legible for trail use. On the trail, hikers now get off-route alerts, offline downloadable routes for areas with poor connectivity, live elevation data for pacing climbs, and full-screen record maps, plus the ability to follow routes directly from Apple Watch without needing to carry their phone. After the hike, Strava boosts social sharing with hiking-focused clubs, sticker stats overlays, cinematic 3D aerial Flyover animations, and activity replays for subscribers, reinforcing Strava's push to become a go-to tool not just for runners and cyclists but for the rapidly growing hiking community.

DJI TARGETS INSTA360'S LUNA CAMERA WITH NEW OSMO POCKET PATENT LAWSUITS - DJI has filed two patent lawsuits in the United States against Arashi Vision Inc., better known as Insta360, alleging that the company's new Luna handheld gimbal cameras infringe multiple design and utility patents related to DJI's Osmo Pocket lineup. One lawsuit claims Insta360's Luna Pro and Luna Ultra copy the Osmo Pocket 3's "ornamental design," pointing to the elongated handheld body,

neck connecting to the gimbal arm, the gimbal and camera assembly, plus details like the top module with rotatable display, bezel, lower control section with scroll wheel and record button, side accessory slot, and bottom port. The second lawsuit cites four utility patents that cover, among other things, a single control for switching between follow and locked gimbal modes, a handheld gimbal with integrated subject tracking and real-time on-device display, a control method that uses the camera's own image to drive motor commands, and a self-contained system that tracks a subject while showing the footage on the built-in screen , capabilities DJI says the Luna line "blatantly" copies wholesale. DJI argues Insta360 has had knowledge of these patents at least since the filing of the complaints and accuses the company of willful infringement, asking the court in the Eastern District of Texas for a permanent injunction, damages of no less than a reasonable royalty, disgorgement of profits, and enhanced damages. According to the report, DJI appears to have been preparing this legal action since at least the 2026 NAB Show, where Insta360 widely promoted the Luna cameras as direct competitors to the Osmo Pocket series, and then moved once the Luna Ultra officially went on sale in the U.S., adding to a growing legal battle that already includes a separate DJI lawsuit earlier in the year over drone-based image processing patents.

WAZE BRINGS TRAFFIC LIGHT ICONS TO NAVIGATION IN A SLOW GLOBAL ROLLOUT - Waze has begun more widely rolling out a long-tested feature that displays traffic lights directly on its navigation maps, finally catching up to Google Maps and Apple Maps, where this capability has been standard for some time, and giving drivers better awareness of upcoming signals on long stretches of road where a light might otherwise

surprise them. The company first appeared to test traffic light indicators in December 2025, and over the past few months users have reported seeing the feature intermittently, with a recent Reddit thread highlighting that more people in the United States are now seeing traffic lights appear along their routes, though availability still varies by user and region. A screenshot shared by one user shows multiple lights clearly marked on U.S. streets, suggesting the rollout is real but still limited, and 9to5Google notes that there is no clear timeline for when Waze will “open the floodgates” and make traffic lights visible for everyone. The article closes by inviting readers to report whether they are seeing the new icons in their own Waze app and points them to additional Waze and Google Maps coverage, including pieces on speed bump and speed limit warning features, Google Maps’ major “Immersive Navigation” update, and improved support for using Waze on a phone while connected to Android Auto, framing the traffic light rollout as part of a broader stream of navigation enhancements across Google’s ecosystem.

CREDITS

The editor at SURFMAN.co extends gratitude to all of the following for their inspiration and assistance, in one way or another, for being able to put this publication together, and make it available to you, the readers. From apps, hardware, to open source software, stock photography, to graphics used freely, and provided by photographers, programmers, and creators, this work exists in this format so that I can share it with those of you out there who is interested in this content.

There will always be more to credit for any reason than I can remember or keep track of, but I do my best, and I update these listings frequently.

UNSPLASH PHOTOGRAPHERS:

SURFMAN.co chooses stock photography images for our site headers, and blog post featured photos that celebrate nature, and the love for living. All of the photography you see across our website comes from Unsplash photographers at UNSPLASH.com and creators who provide extremely beautiful stock photography so that website owners can provide beautiful domains and social media for their visitors. As the owner of SURF MAN, I am grateful to the following people at Unsplash for their contributions to the Unsplash platform that I have used to enhance this project. Without them, this website and directory would be extremely dull looking. Go check out their pages at Unsplash.
